

FORD EXPEDITION VS. CHEVY TAHOE CHALLENGE

1st test: runway test

In this test, we take the Ford and Chevy and do a speed & stop runway test.

Ford

7/10

It handled well and sped up well, but we had tire skid at the end

Chevy

7.5/10

Same as the Ford, but with less tire skid at the end

2nd TEST: TURN TEST

In this test, we test the two SUV's in the event of a sharp turn

Chevy

8 / 10

It handled well, but it wobbled in the turn

Ford

7.55/10

It goes, but it had a longer turn radius, but the Advance Track kicked in during the middle of the turn

3rd test: parking

In this test, we attempt to park the vehicles in a Medium-Tight stall

Ford

9/10

It turned very well and with the Park Assist, it helped us along the way.

Chevy

8.5/10

We didn't get the Backup-Camera version, but the park assist helped us along the way.

Final Test: Looks

In this test, we look at the vehicles side-by-side and consider the design. (This is an opinion test, this means nothing)

Chevy

9.5/10

This Tahoe has all of the previous decades of Tahoe's packed into one 2007 model. But at the same time, the color selection isn't very intimidating

Ford

9.4/10

This Expedition redesign was a great success. We love the 2003-2007-model look, but we wish Ford would reconsider redoing the whole shape of the body. They have had that shape since 2000. In 2003, they just redid the panels of the vehicle.

So,

What was the best performer?

**In our expressed opinion,
We would take the Tahoe.**
